

North Conway, NH (NCON3) Monthly Weather Summary

February 2025 Summary

Summary

February 2025 was both snowier and colder than normal, with the month ranking as the eighth snowiest February since records began in 1959 in North Conway with a total of 37.8 inches falling. It was also the snowiest February since 2017 when 47.5 inches of snow fell that year. According to the Northeast Regional Climate Center snowfall throughout the region varied from nearly one foot below to one foot above normal for many locations (the Adirondack, Green, and White Mountains, all saw normal to above normal snowfall).

Snow depth grew during most of the month of February. Snow on the ground ranged from a minimum depth of 11 inches to a season maximum of 21 inches on the morning of the 21st. The largest snowfall of the winter season occurred on the 21st when 9.9 inches of snow fell from a single event on the 16th and 17th. The last snowstorm to break the 10-inch threshold occurred last April 2024 when a late season storm dropped 11.7 inches of heavy wet snow, leading to scattered down trees and power outages.

Overall, February continued a colder to slightly colder than normal stretch that started near the beginning of January. Temperatures managed to dip to zero or below on five different days across February, and 15 out of 28 days saw temperatures stay below the freezing mark. A maximum temperature of 50F was recorded on the 25th-26th and a minimum temperature for the month was -9F on the 1st-2nd.
